have discovered. To help these providers better communicate with the patients they serve, Ana Malinow Rajkovic has prepared the Manual for (Relatively) Painless Medical Spanish, a lively and innovative self-teaching guide to the grammar, pronunciation, and medical vocabulary of Spanish. Presented in a systematic and highly entertaining fashion, twelve lessons cover some of the most commonly encountered situations. These include the family clinic, the emergency room, appendicitis, the social chat, pregnancy, family planning, pelvic inflammatory disease and urinary tract infection, depression, children with asthma, patients with angina, explaining a venipuncture and a spinal tap, and patients with shortness of breath. Each lesson closes with a bilingual interview that includes vocabulary and grammar introduced in that lesson. A guide to the medical history and physical examination appears in English and Spanish in the appendix. Excellent in the classroom or for independent learning, the Manual will enable health care providers better to understand and supply the needs of Spanish-speaking patients. What Level of Spanish is Needed to Take the Course? The course has been created for currently active Nurses as well as those studying to be nurses with little to no knowledge of Spanish. However, individuals who have taken a year or two of Spanish in High School or College will still greatly benefit from the course.

The order, of the questions and answers, is changed every time and it is a timed test. There is not enough time given for learners to look up the questions. They have to know them well before taking the exam or they will not pass. The certification exam costs \$100, but the exam prep course is free with the

purchase of this textbook (see above). In the exam prep lessons, a practice exam can be taken unlimited times to prepare for the final exam.

The Theories Behind the Course

This course was designed based on many pedagogical (learning) and neuroscience (brain science) theories that the author studied in-depth during his Master's degree in Language Pedagogy and throughout his career as Director of the U.S. Institute of Languages.

Negotiating a Conversation

The approach this course uses recognizes that it takes new Spanish speakers years to become fluent. However, if a nurse learns the medical vocabulary and strategies to properly negotiate a conversation, (s)he can learn to work through virtually any situation in a relatively short period of time. For example, if a patient says something a nurse doesn't understand, the nurse can ask them to repeat it or say it slower. If a nurse doesn't know how to say something, (s)he can point to it and ask *¿Cómo se dice?* (How do you say that.) These and many other techniques that are taught to help a nurse work through new situations.

Use of Technology

The use of technology can be very helpful to get through tricky situations. However, if a nurse only uses technology, this provides a poor patient experience and demonstrates poor bedside manner. Also, if only technology is used, body language and gestures are missed and the meaning can be misinterpreted. It is recommended that the nurse continue learning as much as possible using this course and software, then use technology to fill in the gap.
